

Total control of building security... from penthouse to parking garage.

Advanced Synchronized Logistics (ASL) – An Integrated Building Asset Management System can protect your entire facility from smoke and fire damage as well as from breaches of security or acts of terrorism when used in conjunction with Won-Door FireGuard™ and SteelCurtain®.

Control fire, smoke and other toxic fumes in interior atrium designs.

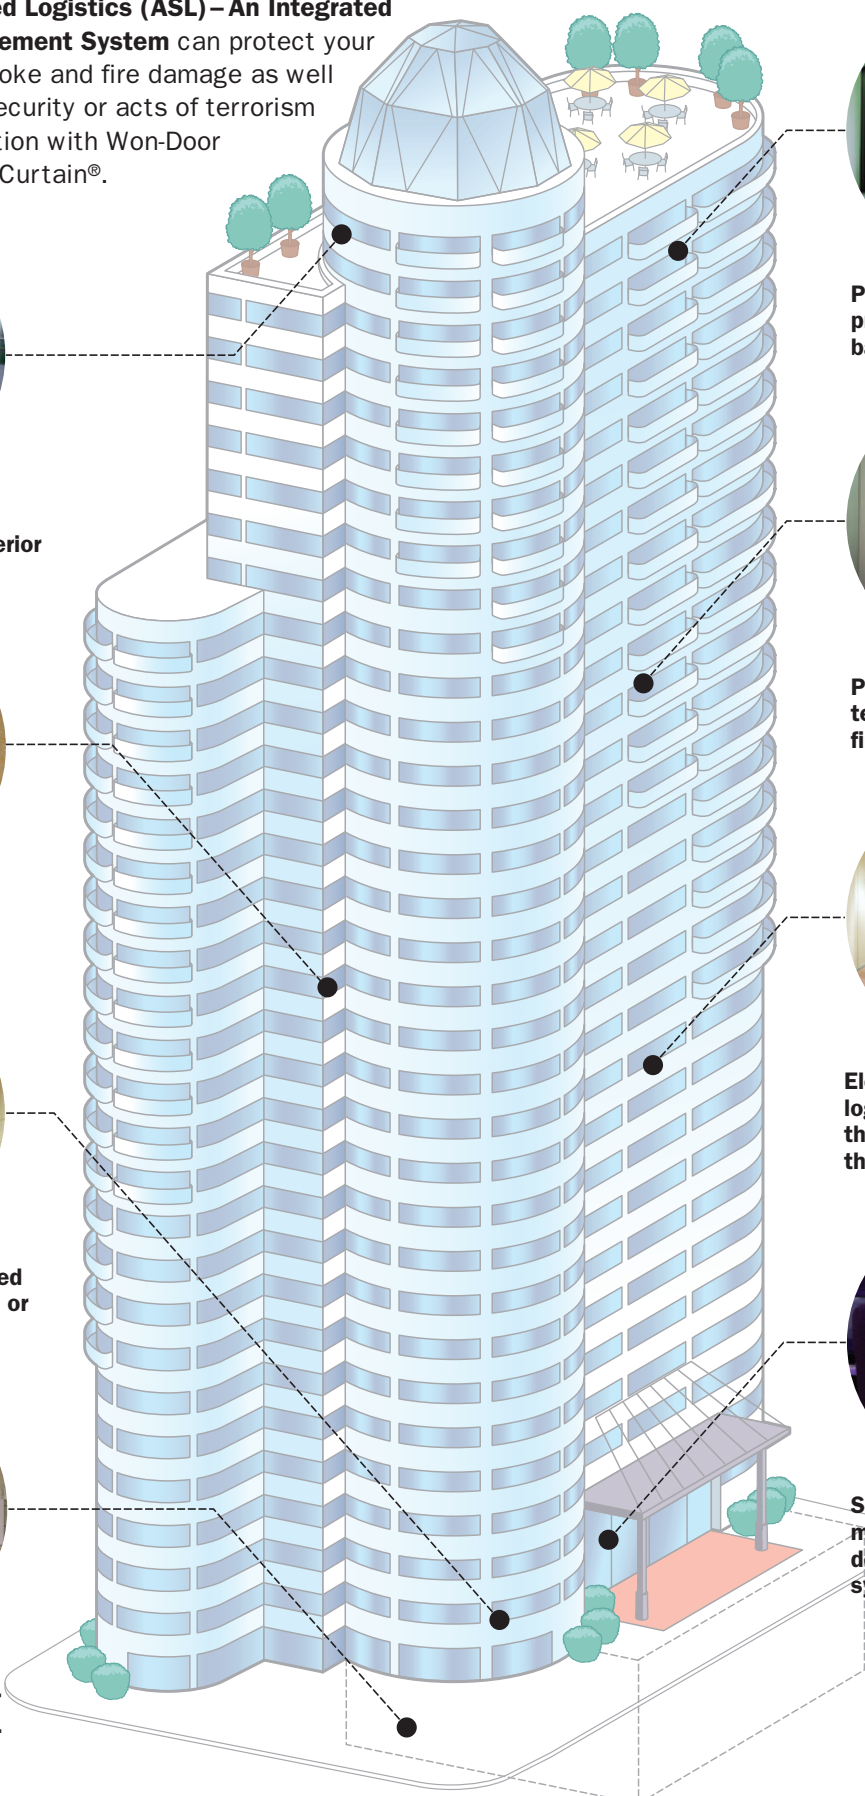

Monitor the status of non-Won-Door products.

Doors can be programmed to report an obstruction or security breach.

Protect openings into a shaft enclosure in under ground parking garages.

Provide executive protection without visible barriers.

Protect the entrance to a tenant suite opening into a fire rated corridor.

Elevator lobbies are a logical spot to control those entering and leaving the building.

Security personnel can monitor and operate every door logged into the system.

Advanced Synchronized Logistics (ASL) – An Integrated Building Asset Management System is a powerful Windows-based software program that will enable building owners and businesses to monitor and control every door logged into the system – up to 256 doors. Protect your assets by controlling after-hours access. Provide executive protection without unsightly barriers. Give building security the ability to secure all or portions of the facility in an emergency.

The ASL/SteelCurtain package is a cost effective way of satisfying means of egress and security requirements at the same time. And ASL interfaces seamlessly with most other electronic monitoring systems. For more information contact your local representative.

Features of the Won-Door ASL Software Program:

- 1 Monitors up to 256 doors from one computer
- 2 Doors can be grouped (by floor for example)
- 3 Indicates if doors are open or closed
- 4 Indicates if doors are locked or unlocked
- 5 Reports door status – over 40 functions ie. Fire, Low Battery, Door Blocked, Thermal Lockout
- 6 User friendly – each screen has a “Help” button
- 7 Event information can be sent to an off-site computer or e-mail address (Fire, Security Violation, Low Battery)
- 8 Tracks AC and DC voltage
- 9 Creates a time-stamped log of all system events
